Load multiple Terminals

Enable Tabs support for your terminal.

Each application or service you want to load must be already installed.

```
sudo -i

apt install htop
apt install sensors
apt install iftop
```

Docker is installed separately or another service you want to monitor.

Create script using a text editor and once saved make as script.

Save as apps_load.sh

```
#!/bin/sh
gnome-terminal --app-id us.kirkland.terminals.byobu -e byobu \
--tab -e "htop" \
--tab -e "watch sensors" \
--tab -e "watch docker ps -a" \
--tab -e "sudo iftop" \
```

The sudo command will require you to enter the password, click tab.

Make the saved file executable.

```
chmod u+x apps_load.sh
```

Run from the terminal or double-click from the GUI.

```
./apps_load.sh
```
